

It will be appreciated that while the illustrated vehicle, which is intended to represent, pictorially, a garden tractor, golf cart or ATV, sometimes referred to as an open air vehicle, placing a covering over the cockpit of the vehicle would not diminish the value of the present invention.

5 Moreover, although the vehicle is shown as supported for movement on four wheels, 12, it may also have three, and even as many as six, and with three axles.

The illustrated vehicle 10 is shown as having several body parts, or elements, such as a forward hood 14, and fenders 16. A rear deck 18
10 projects behind the driver D.

Removably adhered to the vehicle 10, in accordance with the teachings of the invention, are sport bottles 21(a) and 21(b). The sport bottles 21(a) and 21(b) are substantially identical and the difference in designation is intended to represent positioning rather than structural
15 variations. The sport bottle may be referred to herein by the numeral 21 where the position of the bottle is not relevant to the description.

The sport bottle 21 is formed with a generally cylindrical body 23, having a generally flat, or planer, base member 25, typically formed integrally with the cylindrical body at one end thereof, which provides a
20 planer outside wall 27. An opening at the opposite end of the cylindrical body (not specifically illustrated) is capped by a closure device 29.
